Eagle Machinery & Supply Inc.

The EagleEye Talon Vision Saw brings two-sided WoodEye Scanning and the Eagle Talon 3000 High Speed Crosscut Saw together into a compact, tightly integrated package, the company says. It eliminates transitions and maintains complete control of the material throughout the scanning and crosscutting process and is ideal for processing low-grade material at high speeds, the company adds.

Miltec UV

The Miltec UV Gloss Control UV Technology enables manufacturers to achieve an extremely wide gloss range using a single UV coating, the company says. Low, medium, and high gloss levels are attainable, with repeatable results with fewer UV lamps, resulting in lower operating costs, the company adds.

Ogden Group

The PUR Continuous Roll Feed press is a fast and efficient method for laminating the top veneer wear layer to the plywood substrate using PUR adhesives, the company says.

The heavy-duty designed press can be equipped with an automatic in-feed which places the random-length veneer on top of the plywood.

Soest Machinery

The Soest brush sander is available with different sanding brush combinations. It is designed so all brushes can be adjusted in the direction of rotation and speed in order to obtain an optimum result. The machine also has a quick-change system to be able to change the brushes within a few minutes, the company says.

WOODWORKING INNOVATIONS: VERSATILITY. EFFICIENCY. PRODUCTIVITY.

Thin-Cutting Frame Saws from Ogden cut thin veneer slats from solid wood blocks with minimal waste from saw kerf. Multiple saw blades as thin as .036" produce a smooth finish ideal for gluing. Applications include flooring, windows, doors, and furniture.

Ogden Group has developed a method to **Manufacture a Solid Core Substrate** that eliminates the need to purchase plywood. The core substrate consists of a 2-ply construction - a rotary-peeled or sawn veneer bottom layer and a top layer of sticks that are gang-ripped from 4/4 low-grade lumber. The wear layer is then applied on top of the core substrate.

Manufactured for the flooring industry, the **PUR Continuous Roll Feed** press is a fast and economical method for laminating the top wear layer onto a plywood substrate. The system can be manufactured with an automatic in-feed system. Also available with optional cut off saw.

Engineered Flooring
Production Specialists

We can help you with your engineered flooring needs!

WINTERSTEIGER
Thin-cutting & Repair

Precision Thin-Cutting Frame Saws
for any output volume requirements. We have been the leader in frame saws since 1970.

Precision Thin-Cutting Band Saws
in many configurations to meet your exact requirements including future growth in output volume and your product variations. Cutting up to 26" wide with +/- 0.008" tolerance, 0.043" cutting kerf and a surface quality ready for glue!

TRC Timber Repair & Cosmetics
With this technology you now can repair larger knots and cracks than before with traditional putty. The void is filled 100 % in depth allowing for no failures, no shrinkage, no cure time, can be handled, stacked or sanded immediately, and this application only takes seconds!
