

Align Information Technology with Business Goals

Assessment Scope

The scope of an Information Technology Assessment includes physical and virtual locations, processes, workflows, edge connections, endpoints, systems, and the network infrastructure connecting these functional elements together.

Engagement Approach

To conduct an assessment of your business, After Hour Technology discovers and evaluates how your team and functional technology elements operate together.

We review the architecture of IT Systems and discuss the processes utilized for business operations. Then we build alternative strategies and recommendations based on best practices using enterprise information technology frameworks and patterns.

An assessment package is produced which allows a unique snapshot of the organization's technology posture. Call or Text **813.702.0336** to learn more about how an assessment will add value to your business.
