## With Stutter Firmware

Pin Out :

<u>Pin</u>	<u>Function</u>
1	+5VDC In
2	Ground In
3	Not Used
4	Pulses In from the game
5	Pulses Out to Printer
6	Not Used

Stutter Trip Point					
Description	Value	DIP Switch			
		1	2	3	4
Pulses in to reach the pause trip point	1	0	0	0	0
	2	1	0	0	0
	4	0	1	0	0
	5	1	1	0	0
	10	0	0	1	0
	20	1	0	1	0
	25	0	1	1	0
	40	1	1	1	0
	50	0	0	0	1
	75	1	0	0	1
	100	0	1	0	1
	200	1	1	0	1
	250	0	0	1	1
	400	1	0	1	1
500	0	1	1	1	
750	1	1	1	1	

The default pause time is 3 seconds, to extend that to 5 seconds install jumper on MODE 1 jumper pins.

Installing the MODE 2 jumper will make the unit wait until all the pulses are in BEFORE sending out the bursts of pulses.
