Walk for Water

The place we found and installed the community well is a combination between a school and a self help community center, designed in such a way as to promote a sustainable way of life to all the houses in the community. This includes the provision of training and education in agriculture, hygiene, well maintenance and water conservation. The school also offers free classes to local children and currently has over 400 students attending on a daily basis. The impact of this water well will be great in that it will not only provide plentiful fresh water for the children and families living in the community but it will also give the center the opportunity to explore the education and practical training it can offer, especially in agriculture and hygiene.

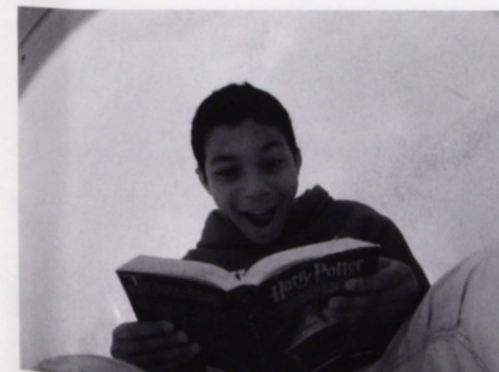

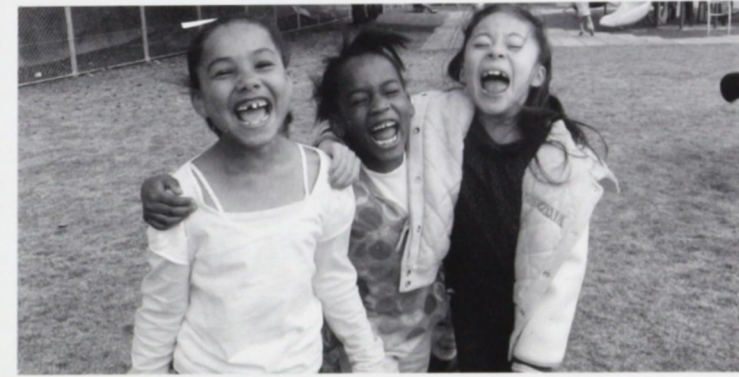

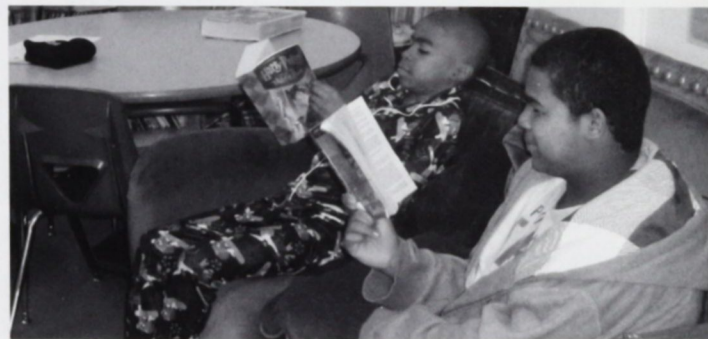

The well is located in the village of Tau Teia, which is in Krobie Real Commune, Siem Reap District. The Self Help Community Center was established in 2007 and is supported by organization called "This Life Cambodia" whose aim is to help the center become self sustainable. You can visit their website at www.thislifecambodia.org. The GPS location of your well is: 13 22 00.6N, 103 47 20.8E .

Thank you all once again for this generous donation. Although it took some time to find a location for this well, I hope you will agree that it has a great home and should make a big and sustainable impact on the community it now serves.
