DHEA Spray Liposomal Formula

Liposomal formulas have increased absorption and bioavailability. Our DHEA is made from natural wild yams. DHEA is the key basic material utilized by the adrenal glands for conversion into the all-important steroids: cortisol, testosterone, estrogens, and others.

Just as importantly, the adrenals also secrete DHEA directly into the bloodstream, where similarly distal target cells throughout the body convert it into testosterone, estrogens and other hormones. The amount of each hormone that DHEA creates during the conversion process depends on an individual's nutrient status, stress, age,, and sex. Normally DHEA levels peak at around age 25, and then decline steadily to approximately 20% of normal levels by the age of 70 6. For those with additional stress, DHEA will decline more rapidly.*

Therefore, because DHEA serves as a substrate to so many vital steroids essential to adapting to stress, approximately 50% or more of our most stressed patients reveals labs that show DHEA deficiency and are subsequently placed onto DHEA.*

DHEA is a major adrenal hormone that supports the cortisol pathway and fundamental anti-inflammatory mechanisms in the body 12,13. Supplementing with DHEA can promote lean muscle mass, energy, stamina, sexual function, mood, immune function, circulatory health, joint health, hormone levels and more.*

Studies suggest that DHEA can aid and facilitate:

- a healthy aging process*(1)
- hormone and adrenal balance*(2)
- bone density*(10-12)
- strength and lean muscle mass*(4)
- sexual functions*(2,7,8)
- mood, memory*(9) and well-being*(5)
- immune function*(1)
- cardiovascular health*(3)
- anti-inflammatory processes*(12,13)

Usage and Safety Precautions: DHEA-S blood levels should be measured and monitored to determine individual needs. The dosage increases in low adrenal states.

Suggested Use: Take 1 capsule daily with food, or as directed by your healthcare practitioner.*

Additional support of adrenal function should include 1) optimization of all hormones including thyroid, 2) nutrient measurement and correction of deficiencies, 3) optimizing detoxification and pH, 4) balancing the mind stressors, and 5) reducing the body stressors with oxygenation.
