

ICC Emulsion Removers™

Application Recommendation Sheet

Unique Features

- * Safe to use on all screen printing mesh
- * Non-DOT Oxidizer
- * Non-DOT Corrosive
- * Non-offensive odors

Product Description

ICC Emulsion Remover's™ are liquid products, which typically have little to no scent and are colorless. They provide consistent and dependable results when used as directed. They are designed to prepare emulsion for easy removal during the reclaim process.

Application Recommendations

After ink has been removed -

(with the recommended ICC Ink Spray/Wipe™ and/or Degradent™)

Apply Emulsion Remover to wet screen using ICC Ambi-Squirt™ spray bottle. Allow to dwell for 60 seconds then remove residue with a water rinse; high pressure water rinse will provide best results. If emulsion is difficult to remove, increased dwell time and/or use of an ICC Heavy Duty Screen Scrubber™ to agitate the product into the emulsion will improve removal.

It is recommended that an AT-6™ chemical dispensing system be used for large format or high volume screen demand to ease application of Emulsion Removers.

Safety and Additional Technical Assistance

As with any chemical, always refer to associated Material Safety Data Sheet for recommendations on appropriate safety gear and precautions. MSDS's may be obtained on the web at www.icc-chemicals.com or by calling Intercontinental Chemical Corporation at 800-543-2075 to obtain these and further technical or application support.
