

MILLENNIUM MOBILE CONNECT

The mobile credentials that works with ALL READERS.

Ultimate flexibility to open doors with digital keys from anywhere

The Millennium mobile connect access control credentials offers access to secured buildings, rooms and common areas with one click from any internet connected smartphone.

Mobile connect provides increased security, enables ease of operation and the flexibility to easily access doors by approved users. All mobile connect credentials are securely managed through the Millennium software platform and are easily assigned through the administrator to all mobile-enabled employees, students or assigned personnel.

The Millennium mobile connect is the most versatile mobile access systems in the market as they work with any reader. One does not need to replace existing hardware to use the mobile credentials as the system is designed to work with any entry hardware linked through the Millennium access control software unlike the competition.

When using the mobile connect app, the system operator must first register mobile credentials within the Millennium software platform system, and provide the users with any necessary software permission.

System operators have full control over issuing and revoking credentials. Revoked credentials can be reassigned, allowing for continued flexibility.

**Images shown are not an exhaustive representation of compatible readers.*

Easy to set up

Easily assign mobile access to cardholders from within the Millennium software platform

Mobile connect app is available for free download from the Google Play and Apple App store

Easy to use

Momentarily unlock doors from any internet connected smartphone

Eliminates the burden of physical keycards

Flexible features

Flexible to fit any reader

Not limited by Bluetooth or NFC proximity restrictions as it works through the software and is always available
