

MILLENNIUM ULTRA INTEGRATION WITH AIMETIS SYMPHONY VIDEO MANAGEMENT SOFTWARE

The Millennium Ultra Access Control management system integrates seamlessly with the Aimetis Symphony video management software to provide you with a combination of superior access control security management and industry acclaimed video monitoring solution.

Ultra is flexible and customizable for any business environment, allowing for easy user access to complex functionality with our intuitive user interface. Aimetis Symphony™ 7 is the new benchmark for intelligent video management software (VMS). Highly scalable, easy to set up and use, Symphony is a great solution for both single server installations and multi-server deployments.

This integration with Aimetis Symphony presents in a clean and easy to use interface – seen directly through Ultra. The combination allows full interaction with live video and recording, turning the access control security interface into a full-featured video security solution.

The Flexibility and highly scalable Millennium Ultra Access Control system is the perfect match for Aimetis Symphony video management software. It provides the same level of performance you would expect when using each platform separately but presented on a single screen. The integration saves time and effort while allowing you to focus on the job of monitoring your facilities, investigating cases and responding to security incidents.

Features

- Seamlessly integrates with the Aimetis Symphony Video Management Software
- Supports the ability to view multiple video recorders and video channels
- Allows for a centralized system and user management, all in one place
- Options include the ability to have multi-level, user access privilege
- Can generate, view and export reporting information from within Ultra
