

ULTRA

MILLENNIUM ULTRA INTEGRATION WITH MARCH NETWORKS COMMAND ENTERPRISE

The Millennium Ultra Access Control management system and March Networks Command Enterprise video management software integration brings together a combination of superior access control security management and world class video monitoring solution. Millennium Ultra access control platform is designed with a highly scalable architecture capable of supporting one door, to thousands of doors across multiple locations.

Ultra is flexible and customizable for any business environment, allowing for easy user access to complex functionality with our intuitive user interface. The integration with the state of the art Command Enterprise software from March Network presents in a clean and easy to use interface – seen directly through Ultra. The combination allows full interaction with live video and recording, turning the access control security interface into a full-featured video security solution

The Flexibility and highly scalable Millennium Ultra Access Control system is the perfect match for Command Enterprise . This integration provides the same level of performance you would expect when using each platform separately but is presented on a single screen, saving time and effort while allowing you to focus on the job of monitoring your facilities, investigating cases and responding to security incidents.

Features

- Seamlessly integrates with the Command Enterprise Video Management Software.
- Supports the ability to view multiple video recorders and video channels.
- Allows for a centralized system and user management, all in one place.
- Options include the ability to have multi-level, user access privilege.
