

Millennium Ultra

Update Version 2.1.1 Release Notes

October 26, 2017

---

Contents:

1. New Features and Enhancements
2. Software Bugs addressed

### 1. New Features and Enhancements

- Tenant access rights support added to Grouped Commands to enhance flexibility and ease of use for instances of Ultra utilizing Tenant capabilities
- Transport Layer Security (TLS) 1.2 protocol enabled by default in the installation to encourage the use of proper encryption and security in new installations
- Added possibility to process Ultra upgrade from the client application (Windows client only) without access to the Ultra server to simplify and streamline the process of applying Ultra updates

### 2. Software Bugs Addressed

- Access Level import functionality improvement to improve and simplify software restorations and upgrades
- DMP events added to Alarm Definition page
- Lockdown and Lock command fix for elevator floors
- Minor bugs fixes and UI improvements
