

Millennium Ultra

Update Version 2.4.0 Release Notes

January 25, 2018

---

Contents:

1. New Features and Enhancements
2. Software Bugs addressed

1. New Features and Enhancements

- Muster Track reports added to Ultra. This new functionality allows operators to determine presence and duration of cardholders within a building or controlled area.
- Ultra client installation optimization. This enhancement improves the client installation process by eliminating the requirement for installation of pre-requisite packages and associated warnings. The packages can now be installed at a later time if required by the user.
- DMP panels icon and functionality added to Floor Map. This allows operators to check status and send commands to panels directly from the floor map interface.

2. Software Bugs Addressed

- Migration tool from Xtra to Ultra – fixed multiple software defects.
- Bug with User By Access Point report fixed
