The U-Factor indicates the rate of heat loss of a door assembly. The lower the U-factor, the better the insulating value and the lower the heating bill.

STC ratings indicate a building material's ability to reduce sound penetration; the higher the STC, the more effective the barrier against sound penetration.

\* Based on independent lab testing of U-factor and STC ratings.

Western Reflections' hurricane impact doorglass meets DP+ 60 to  $\pm 80$ † wind and missile impact code requirements. It can be used to meet Energy Star® criteria in the Southern, South/Central and North Central regions of the US as part of a certified door system. STC (sound transmission class) testing shows that the laminated glass provides extra protection from outside noise infiltration when used in a properly fitted and installed door system. The STC for decorative glass is 37 and the STC for Clear and GBG glass is 35, independent of glass size.

### Hurricane Frame with Clear Glass

- Sturdy Frame Construction
- Maintenance-Free Powder Coated Aluminum

U.S. Patent #5636484

## Turtle Glass Also Available

Thousands of marine turtles nest in the U.S. coastal areas, and state and local ordinances protect hatchling turtles by limiting the brightness of inside-to outside visible light transmittance. Western Reflections' Severe Weather/Impact product line includes tinted gray glass that meet these code requirements.

Meet Code Requirements. Improve Energy Efficiency. Keep Outside Noise Outside.

Additional decorative doorglass patterns, Raise Lower Blinds, GBG and glass inserts for 8 foot doors (80" glass) are available by special order.

# Clear Glass

In addition to our lines of doorlites and sidelites with grilles between glass, we also provide a full selection of clear glass products.

*All Standard doorlites stocked in Solar Shield white paintable frames.*

KNOW THE BEAUTY OF INNOVATION

SYLVAN PARK DOORGLASS: PAGE 13

Plastpro fiberglass doors, with exclusive HydroShield™ Technology, feature fiberglass reinforced door skins, full-length composite stiles, and composite top & bottom rails to prevent water infiltration on all six sides. Plastpro fiberglass doors are unmarred by the wear and tear of everyday use and is unaffected by moisture and humidity. Our fiberglass reinforced doors will not rot, splinter or warp like wood, and won't dent, rust or delaminate like steel.

# Plastpro Fire Rated Fiberglass Doors

KNOW THE BEAUTY OF INNOVATION

Made with a fire-retardant foam and guarantee to withstand fire for a minimum of 20 minutes, Plastpro fire-rated and waterproof fiberglass doors qualify homeowners for tax credit and energy savings that result in reduction on overall energy bill. Our fire-rated doors are extremely durable and fire-resistant and most importantly, provide you a safer home while still being more affordable and energy efficient.

# Plastpro PF™ Frames

Plastpro PF Frames are 100% full-length composite frames offer a rigid poly-fiber formulation that provides durability, support and reliable strength. Our frames offer twice the screw-holding power of wood and are stronger and more durable. The closed cell structure ensures that the PF Frames will not absorb moisture, thus feature a limited lifetime warranty against rotting, splitting and insect damage. Our frames are easily machined, painted or stained to give the look of wood, without all the long-term concerns or rot and decay.

# Upgrade Your Door Sill Performance—Z-AC Sill.

Beyond making a statement and offering a welcome, your entry system must perform.

**Entry system**—your door panel paired with surrounding components designed to work together to keep out air and water.

**Endura components**—sills, weather sealing, astragals, frames and multipoint hardware—deliver the best possible protection from the weather. For you, entry system performance means protection from costly water damage, energy savings and security. But unless you choose Endura components, performance is not standard.

## Z-Articulating Cap Sill No adjustment needed.

Adjustable sills are great. As long as they are adjusted. No adjustment equals gaps, leaks, torn door bottoms or worse. Introducing the Z-Articulating Cap Sill. Z-AC solves problems before they start. The cap can move up, or down, to maintain contact with the door bottom and preserve the seal. With the Z-AC at work, you are constantly protected from the weather and potentially costly damage. Even on problematic French doors, where an astragal bolt receiver breaks one long cap into two for even better results. Problem with an existing Z-Series sill? Retrofit a Z-AC cap by simply replacing the door bottom and cap with a Z-AC door bottom and cap. Problem Solved.

U.S. Patents: 6,789,368; 7,350,336; 8,522,483 and U.S. Patents Pending

# Upgrade Your French Door

## Ultimate Astragal (STANDARD)

French door performance taken to the next level.

**Patented three-point sealing system** eliminates water and air infiltration common with other systems.

**Floating boot.** When the lever is flipped, the spring-loaded boot is secured in place. When the lever is released, the boot lifts clear of the threshold, to maintain a lasting seal that won't fail after continuous use.

**4-Way adjustable strike retainer.** Provides improved alignment for better compression of the weatherstrip.

U.S. Patents 5,857,291; 6,491,326

## Multi-Point Astragal (UPGRADE)

Affordable multi-point locking.

Typical French door installations only hold the active door at one point: the deadbolt. This permits **door panel deflection** and air and water infiltration.

Engaging the Multi-Point deadbolt activates **three** secure locking points. An easy-to-use patented **flip lever** engages both flush bolts along with the floating boot in one motion. Weather is sealed out, deflection is eliminated.

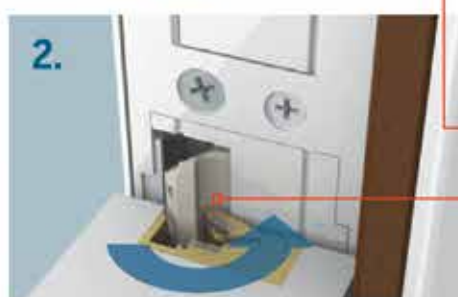

The Multi-Point Astragal works with most standard deadbolt packages, requiring no additional hardware or extensive machining for easy installation and retrofitting to existing door units—savings for you.

### One-two secure performance

**One:** Turning the deadbolt activates patent-pending lock paws.

**Two:** Lock paws engage keepers in the active door, providing three locking points.

U.S. Patents 5,857,291; 6,491,326; 8,258,298; 8,157,299

# Upgrade Your Door Frame Performance—FrameSaver®.

Rot-proof. Worry-free.  
Install it and forget it.  
FrameSaver protects  
you for life.

No rot, mold or water  
damage of any kind.  
No insect damage.  
Ever. Guaranteed.

 **Endura®**  
PERFORMANCE STANDARD

## FrameSaver Door Frames

### Lifetime Warranty.

FrameSaver Door Frames from Endura are simply the best door frames on the market. Rot proof, they are so dependable they come with a fully transferable lifetime warranty.

**Patented composite bottom** won't absorb water, won't rot, won't mold, resists insects—even finishes and paints like wood.

**Our brand** is stamped right into the product, so you know you are backed by the original FrameSaver.

Your entry system must perform.  
Door components from Endura have been  
precisely engineered and strenuously tested  
to protect you and your home from air and  
water infiltration.

# Upgrade Your Security—Trillennium®.

Security.  
Strength.  
Reliability.

## Trillennium Multi-Point Locking Systems and Entry Hardware

**Peace of mind.** One solid unit with three latches based on the strength of patented I-Beam construction for reliable, proven performance.

**Security.** Operating as one, all three latches engage when the door is closed. One movement of the thumbturn or key activates all three deadbolts. Activated, each latch is a deadbolt and cannot be compromised.

Patented **strike rollers** and **latches** draw the door panel into perfect alignment with the jamb for a tight seal with no deflection.

**Panic release.** A single downward turn of the interior handle releases all three deadbolts.
