

# Almac Group

## North American Headquarters

Lower Salford Township, PA. 240,000 SF.

### Services

RE Due Diligence, Master Planning, Workplace Strategy, Architecture, Interior Design, Furniture

### Description

The Almac Group project represents the planning and design of an integrated campus for a European based pharmaceutical company. The North American Headquarters facility for Almac, a Northern Ireland based company specializing in Pharmaceutical research, development, analytical and clinical trial services was planned for multi-phased expansion. The campus includes a 3 story 80,000 SF office building and 160,000 SF GMP production, laboratory and warehousing building.

The office building incorporates reflects Almac's European heritage with a long narrow floor plate which maximizes natural light penetration and exterior views for all employees. The open corridor floor plan encourages impromptu conversations across groups. The central open stair with informal seating areas at each level facilitates greater interaction between groups on different floors. Located in a rural setting, the use of wood finishes in the central stair, social hubs and meeting rooms were selected to provide continuity to the buildings setting.
