Certificate of NSF/ANSI/CAN 61 Compliance

Product Series: Rubber Dynamics BN700120 (BUNA 70) and E700120 (EPDM 70) Series Compounds

Applicable Compounds:

- BN700120, E7001200

This document certifies that the BN700120 and E700120 compounds utilized in the manufacturing of the product series listed above are compliant with the requirements of NSF/ANSI/CAN 61: Drinking Water System Components – Health Effects.

Based on official certification documents and material specifications provided by our supplier, these compounds meet the strict chemical leaching and toxicological standards required for contact with potable drinking water.

Under normal and foreseeable conditions of use within municipal water treatment and distribution systems, these compounds meet the strict chemical extraction and contaminant leaching limits established under the standard. Testing confirms that any potential migration of regulated substances into drinking water remains well below the maximum allowable levels (SPACs and TACs) required to maintain water safety and quality.

These compounds are formulated and manufactured using ingredients that are fully compliant for contact with potable water, ensuring they do not introduce harmful levels of contaminants, taste, or odor to the water supply.

This certification is contingent upon the products being used under normal and foreseeable conditions as specified by the material manufacturer.
