

TRUEGARD 3025

Vanishing Oil

PRODUCT DESCRIPTION

TRUEGUARD 3025 VANISHING OILS are high performance products intended for light to moderate duty stamping, forming, and punching of steel, copper, and aluminum alloys.

TRUEGUARD 3025 VANISHING OILS evaporate to leave a clean surface, these products leave just enough residue to provide the desired rust prevention. The powerful lubricity agents used in these products work synergistically with the evaporative base to improve part finish and minimize die wear. The outstanding load carrying ability eliminates much of the galling and scoring common with conventional vanishing oils.

TRUEGUARD 3025 VANISHING OILS are clear, light bodied fluids which are easily applied by standard spray, brush or roller equipment. The mild solvency will not harm plastic or rubber components, while the exceptionally low aromatic content will not cause worker dermatitis under normal circumstances. In addition, the surprisingly low odor characteristics make for a more pleasant workplace, without the health problems associated with other vanishing oils.

TYPICAL PROPERTIES

Application	Light Duty
Multi-Metal Safe	Yes
Flash Point, F (Also available 140 F & 175 F flash points)	110
Color	Clear
Odor	Mild
Residue	Slight
Sulfur	No
Chlorine	No
Fat	Yes
