

TRUEGARD SS-266

PRODUCT DESCRIPTION

TRUEGARD SS-266 is a semi-synthetic coolant concentrate designed for a wide variety of grinding and machining operations on steel, copper, and aluminum alloys. Typical machining operations include Drilling, Milling, Tapping, Sawing, and Turning.

TRUEGARD SS-266 produces a brilliant green color upon addition to water. This solution is hard water stable, nongumming and exhibits excellent detergency. The absence of sulfur and chlorine make this product exceptionally safe and easy to use.

TRUEGARD SS-266 possesses a balanced Ph to prevent attack of nonferrous metals while ensuring mildness to operators skin. The mild Ph also prevents stripping of the paint from the machine surfaces. **TRUEGARD SS-266** contains the leading edge of biocide technology in order to prevent excessive bacterial growth which might otherwise lead to undesirable odors.

TYPICAL PROPERTIES

Color – Concentrate	Orange
Color – Dilutions	Green
Ph – 5%	9.1
Chlorine	None
DEA	None
DCHA	None

TREAT LEVELS

Grinding	20-40:1
General Machining	10-20:1
