

Tips and Tricks: Using Kiddom Throughout Different Devices

Kiddom is not just limited to use on computer browsers. Kiddom's iOS and Android apps make it easier than ever to plan, assess, and analyze learning. Most importantly, this is an app **students** can use too: the Kiddom app is an effective way for 21st century students to stay organized, submit work, and get feedback in a timely manner. **Don't feel like downloading the app?** No worries. Kiddom works on mobile web too, which is just the internet browser on your phone (Safari, Google Chrome, etc).

To use Kiddom to its maximum potential, we highly recommend using the web browser. However, there are only some small limitations with using the Kiddom app or mobile browser. Here are some tips and tricks for using Kiddom throughout all of your devices:

Key: **Web Only** **No Device Limitations** **Some Device Limitations**

Planning

Available only on the Web Platform, Planner allows you to map out your curriculum, save resources, and create playlists of assignments. To assign, you can simply drag and drop resources from Planner onto Timeline. You can also use Planner with co-teachers and collaborators to create and edit curriculum.

Assessment

Although you can only use Planner on Web, you can still create assignments, view assignments, and submit assignments on web, mobile web, and the app! Students can also view and submit assignments on web, mobile web, and the app. There are no limitations for assessment creation and access throughout devices.

Reports

Reports, like the Assessment section, is completely available throughout all three platforms. **The only functionality not available on the app is accessing PDF Standards and Assignment Based Reports, or having them emailed to you en masse.**

Communication & Collaboration

Web, mobile web, and the app allow you to communicate with your students and your students to communicate with you. Simply leave feedback for each other from the comments section on an assignment. You can also add collaborators and work on shared classrooms no matter the device you're using.
