

NetDevOps: The Key to Declarative Network Automation

Sebastian Grabski - Director, Customer Solutions

Who's NetDevOps?

NetDevOps

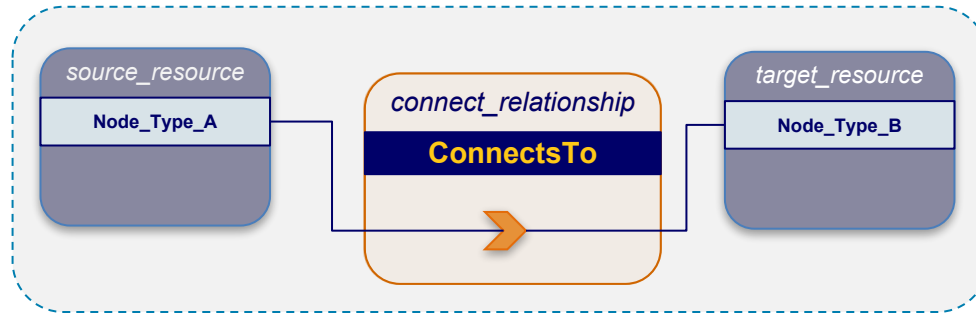

The special breed of network engineer who knows how to leverage

Declarative Network Automation

What's declarative network automation?

- abstracts “the what” (intent) from “the how” (implementation)
- leverages declarative orchestration language

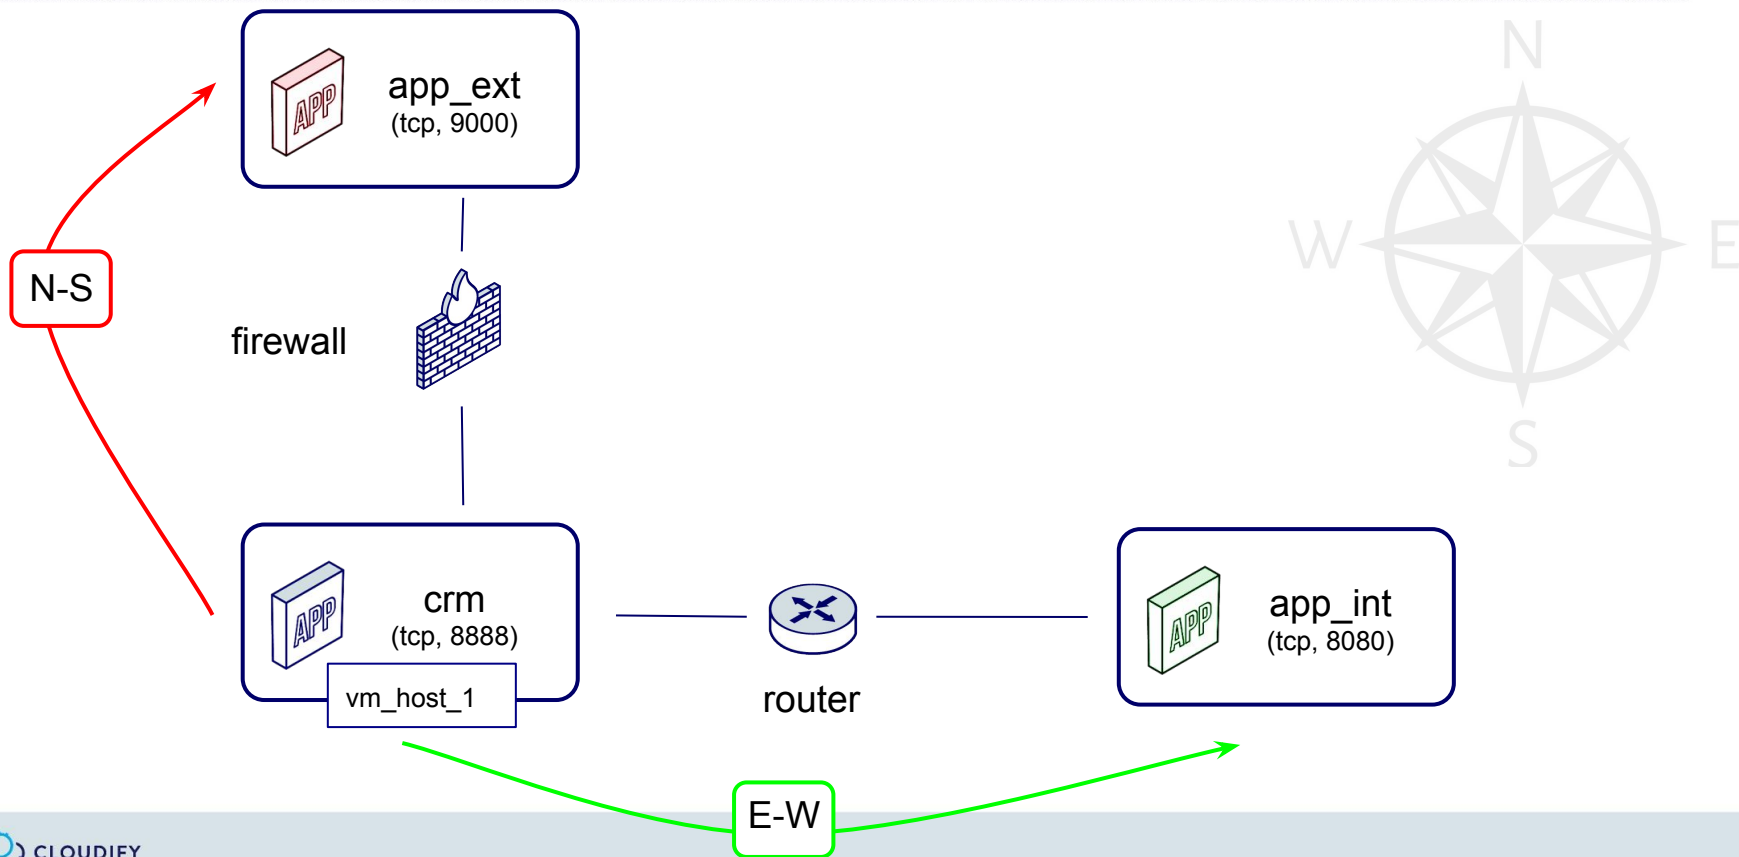

Example #1

“Declarative Application Access”

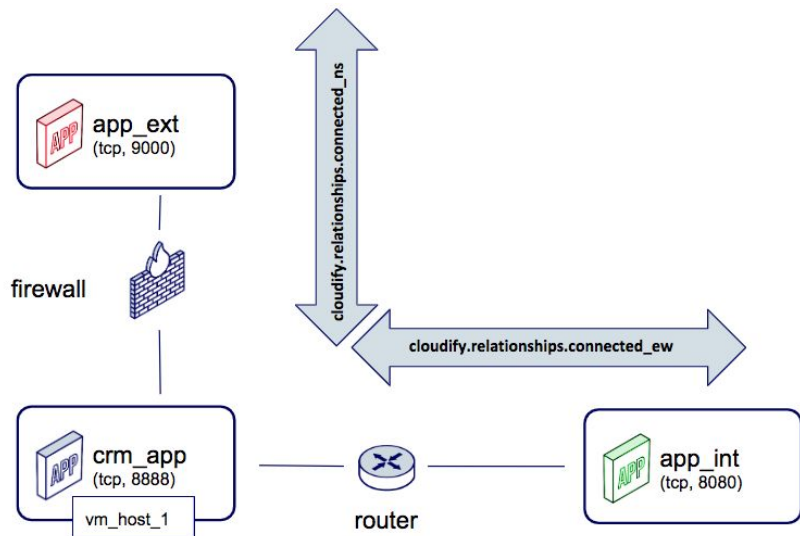

The problem

Solution

```
41 crm:
42   type: cloudify.nodes.Application
43   properties:
44     listens_on:
45       - [tcp, 8888]
46   relationships:
47     - type: cloudify.relationships.connected_ew
48       target: app_int
49     - type: cloudify.relationships.connected_ns
50       target: app_ext
51     - type: cloudify.relationships.contained_in
52       target: vm_host_1
53
54 app_int:
55   type: cloudify.nodes.Application
56   properties:
57     listens_on:
58       - [tcp, 8080]
59
60 app_ext:
61   type: cloudify.nodes.Application
62   properties:
63     listens_on:
64       - [tcp, 9000]
```

Example #2

“Declarative VPNs”

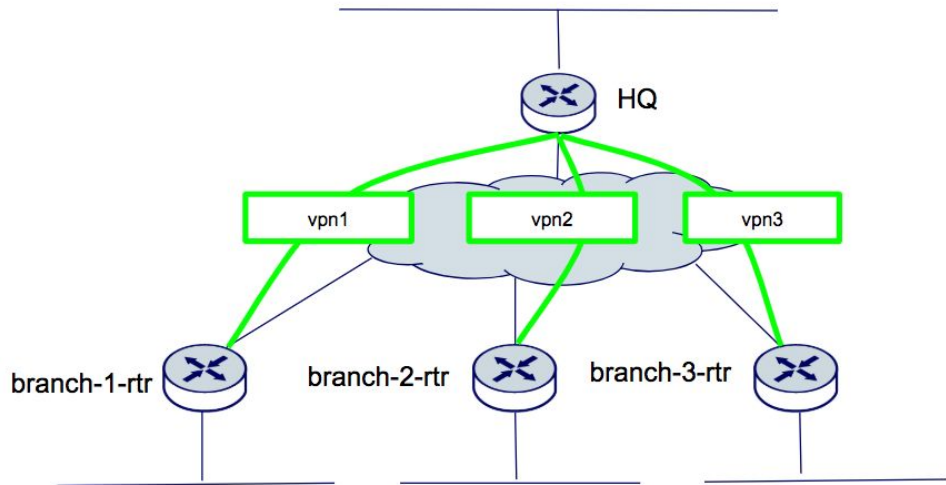

VPN topology

Solution

HQ:

```
9
10 type: cloudify.nodes.vRouter
11 relationships:
12   - type: cloudify.relationships.rtr_connected_to_vpn
13     target: vpn1
14   - type: cloudify.relationships.rtr_connected_to_vpn
15     target: vpn2
16   - type: cloudify.relationships.rtr_connected_to_vpn
17     target: vpn3
18
```

branch-1-rtr:

```
19
20 type: cloudify.nodes.vRouter
21 relationships:
22   - type: cloudify.relationships.rtr_connected_to_vpn
23     target: vpn1
24
```

branch-2-rtr:

```
25
26 type: cloudify.nodes.vRouter
27 relationships:
28   - type: cloudify.relationships.rtr_connected_to_vpn
29     target: vpn2
30
```

branch-3-rtr:

```
31
32 type: cloudify.nodes.vRouter
33 relationships:
34   - type: cloudify.relationships.rtr_connected_to_vpn
35     target: vpn3
36
```

vpn1:

```
37
38 type: cloudify.nodes.Vpn
39
```
