SPRING 2024 NEWSLETTER

UNDERSTANDING REVENUE PROTECTION (RP) & HOW IT WORKS

-CRAIG LADWIG

Looking Back and Protecting Your Future.

If we only knew what mother nature had in store for us. If we only knew what the markets will do. It is easy to look back and regret not making a marketing decision, or question if you did everything right to produce your next bumper crop. That being said, one thing you can do is use Revenue Protection (RP) as a tool in your marketing program and to provide you crop protection in the form of a REVENUE guarantee, not PRICE guarantee.

Looking back at 2023 corn, we started in February with a Base Price of \$5.91, and a Harvest Price in October of \$4.88. Remember with RP, price is only half of the equation. To determine if you have a loss or not, we still take into account your harvested production. *See below an example.*

Corn APH (Actual Production History) 180bu / Coverage level 75%

180 bu avg x 75% level = 135 bushels x \$5.91 (base price) = \$798.00 guarantee per acre.

Harvest price of \$4.88 x _____ bu Harvested production = Harvest Value

If your harvest value is less than the revenue guarantee, you will be paid the difference. Please remember that you will NOT be paid the difference between the spring and fall price on what your harvest. The policy protects against Revenue, not just price. You will always need to account for your harvested production to determine if you have a loss or not. In the example above, if you divide the harvest price of \$4.88 into the \$798.00 guarantee that was originally set in February, your new bushel trigger becomes 163.5. In summary, with a lower harvest price, it takes more bushels to meet your revenue guarantee.

In many areas, tremendous yields were reported even with the dry start to the growing season. Last minute rains saved the crop for a lot of producers, but not everyone was that fortunate. We still had many areas affected by drought and did not see the yields that others did. Remember, these tremendous yields go into your 10-year APH raising your coverage and protecting your future. We are protecting against what we cannot control no matter when it happens.

SIGN UP OR MAKE CHANGES TO YOUR POLICY
SPRING CROPS DEADLINE MARCH 15, 2024

REPLANT COVERAGE

-RENEE SCHAAL

Replant coverage is included in Yield and Revenue Protection policies. To qualify, the amount replanted must be 20 acres or 20% of the unit, whichever is less. Before replanting, **prior authorization** from the crop adjuster must be obtained. Contact your agent prior to replanting to initiate a claim.

Replant coverage pays:

Corn: 8 bushels X spring price

Soybeans: 3 bushels X spring price

Early Replant Option Add-On Coverage

An insured can add Early Replant Option (RO) policy to their insurance policy. The Benefits include:

- **No 20/20 rule to qualify. Losses pay per acre.**
- **Higher level of coverage than basic MPCI replant coverage.**
- **Provides replant coverage for 10-20 days prior to Earliest Plant Date.**
- **Possible to get a payment from MPCI and RO policy.**

EARLIEST PLANT DATES

Corn

April 10

April 21

Soybeans

April 15

April 20

April 30

FINAL PLANT DATES

Corn-Grain: WI	May 31
IL	June 5
Corn- Silage: WI	June 5
Soybeans: Mid/ Northern Counties	June 10
Southern Counties	June 15
Cigar Binder Tobacco:	July 10
Green Peas:	June 5
Lima Beans: Northern Counties	June 25
Southern Counties	June 30
Oats: Southern Counties	May 5
Mid Counties	May 15
Northern Counties	May 31
Onions:	May 15
Snap Beans: Northern Counties	June 20

SPRING FORAGE SEEDING

We can insure 90-100% Alfalfa stands, 60-89% Alfalfa stands, and Red Clover in the Spring, for more information please reach out to your agent.

Premium for forage seeding is due by Sept. 30th.
This will be on the first bill you see from the company. If the forage seeding is not paid by that date the policy will be cancelled.

2024 CROP INSURANCE PRICES

Crop	Base Price 2023	Estimated Projected Price 2024	How Price is set for Crop Insurance
Corn	\$5.91	\$4.77 as of Jan. 24, 2024	Price set using the Avg. trading days in Feb. using Dec. CBOT corn 2024
Soybeans	\$13.76	\$12.07 as of Jan. 24, 2024	Price set using the Avg. trading days in Feb. using Nov. CBOT soybeans 2024
Wheat		\$6.72- Final Price Set	

PREVENT PLANT REMINDERS

-MATT BALFANZ

Based on the dry conditions this summer, and into the fall, coupled with the lack of snow as I'm writing this, it is hard to think that we could have a wet spring challenging us to get crops in the ground in a timely fashion. Things can change very quickly though, and we need to keep a few things in mind as it pertains to our crop insurance policy and being prevented from planting acres.

First and foremost, if you have questionable areas as we approach the end of May, reach out to your agent to discuss. We need to file a claim as soon as we've identified an issue and there are a number of qualifications to discuss so we can determine if acres are eligible and how they would get paid should you decide to claim prevent plant. Some key qualifying questions are as follows:

Is the prevented area at least 20 acres or 20% of the total acres of that crop in that unit? If it is less than that, they will not qualify. You can combine areas within a unit to reach those parameters. For example, four 5-acre areas would satisfy this requirement.

Have the prevented acres been planted, harvested, and insured in one of the last 4 years? If they have not, they will not qualify. This includes acres new to your operation.

Have you significantly changed your rotation? This may cause problems when it comes to eligible acres as you are only allowed to claim prevent plant on the highest number of acres you have planted in the past 4 years for that crop. If you have added land, this eligibility will get increased by the % of cropland you have added to your operation. This is a very important discussion with your agent so there are not any surprises when the claim gets settled.

One positive change made for the 2022 crop year was the relaxing of the cover crop rule. You are now allowed to plant a cover crop on prevent plant acres and harvest that cover crop without penalty. Cover crops can be hayed, grazed, or chopped but not harvested for grain. Corn is not allowed as a cover crop.

Communication is key when navigating through a prevent plant situation. Reach out to your agent as soon as you feel you may have a problem.

ARC/ PLC 2024 ELECTIONS:

-PAUL MITCHELL, UW- EXTENSION

- **ARC-CO is recommended for corn, soybeans, wheat and oats for Wisconsin farmers**
- **Election Deadline at FSA is March 15th**

"With the 1-year extension of the 2018 Farm Bill, farmers have until March 15, 2024 to make their commodity program decisions for their base acres for each crop and each FSA farm. Changes for this year include an increase in the PLC Effective Reference Prices for corn, soybeans, and oats. They are now \$4.01 for corn, \$9.26 for soybeans, and \$2.76 for oats, higher than the previous reference prices of \$3.70 for corn, \$8.40 for soybeans and \$2.40 for oats. Wheat still has an effective reference price of \$5.50. USDA price projections for 2024 marketing-year average farm price published in November 2023 are above the PLC Effective Reference Prices for all crops: \$4.50 for corn, \$11.30 for soybeans, \$6.80 for wheat, and \$3.10 for oats. As a result, my recommendation is to sign up for county ARC (ARC-CO) for corn, soybean, wheat, and oat base acres for 2024.

ARC-CO is the better option for those wanting to maximize potential payments because county-level production issues are more likely to cause low county yields that trigger ARC payments than aggregate market conditions to cause the national marketing year average price to fall below the effective reference prices.

See my ARC PLC Resources Page <https://aae.wisc.edu/pdmitchell/extension/arc-plc-signup/> for more resources, including videos explaining the logic for my recommendations, an overview of SCO and ECO, and recommendations for minor crops in Wisconsin." From Paul Mitchell, UW Extension (published Jan. 4, 2024)

WINTER KILL

-KATE LONZE

Winterkill is always an issue to be aware of for wheat and forage producers. With the lack of snow cover we've seen this year, it's imperative to double check those fields as they come out of dormancy in the spring.

Fields only need an appraisal if the crop is going to be destroyed. DO NOT destroy an insured crop without calling your agent first!

If the fall crop fails, you may have the option to plant and insure a second crop after the failed first crop.

2023 Spring Forage Seeding: Unless your fields look fantastic, call your agent to turn in a claim to have an adjuster look at them. You may still be eligible for a claim if your stand is below 75% of the average stand.

2024 fall forage seeding (planted fall of 2023): If there is winter kill and you want to replant your forage seeding, you may be eligible for a replant payment. You must have prior authorization from the insurance adjuster before replanting.

SPECIAL EVENT RAIN INSURANCE

-CRAIG LADWIG

Rain insurance is a unique policy that protects against literally just that, Rain! If you have ever been involved in an event that is dependent on mother nature for the success of the event, this policy will interest you. In the past we have covered outdoor weddings, concerts, festivals, county fairs and tractor pulls. To determine how much insurance is needed, fixed expenses, total revenue, and profits need to be considered. The steps to deciding coverage are:

- What is the date(s) of the event?
- Determine potential revenue loss.
- How much rain will cause a revenue loss (in ¼" increments)?
- During what time period(s) will rain cause a loss?

This policy is sight specific, meaning rain totals are monitored directly at the sight of the event. The amount of rainfall is measured by an onsite rain gauge. Many of our competitors offer similar policies, but do not offer sight specific monitoring when determining rainfall amounts. Rates are based on the event location, total revenue being covered, the selected time frame and the amount of rain needed to trigger a loss.

Your event does not need to be cancelled to collect. If you receive over the amount of rain protected in the insured window, the policy will pay. Sometimes attendance will suffer because of rain in the forecast. If you still have the event and the policy pays, it will help subsidize your income for the event. Other times if the event is cancelled, you already have fixed costs and the rain insurance loss payment will help cover those expenses.

DAIRY & LIVESTOCK INSURANCE

-DEANNA RANUM

If you are raising cattle, swine or selling milk; there are subsidized insurance programs available to you. There are 3 different types of policies available. Here is a quick summary of how they each work:

DAIRY REVENUE PROTECTION (DRP)

- Available for Milk
- Gives you protection against the decline in the quarterly milk price.
- You may cover on a class or component basis.
- Available to purchase daily after market close. Sales close at 8:30 am the following day.

LIVESTOCK RISK PROTECTION (LRP)

- Protects against a decline in the price of feeder cattle, fat cattle or swine.
- Sold in increments from 13 weeks to 52 weeks.
- Available to purchase daily after markets close. Sales end at 8:30 am the following day.

LIVESTOCK GROSS MARGIN (LGM)

- Covers a margin of profit using final price and feed costs for cattle, swine, or milk.
- Available to purchase every Thursday after markets close and prices are announced.

If you think one of these policies may help your operation, please contact your agent for more information.

HAIL & WIND INSURANCE

-MATT BALFANZ

Hail insurance does not automatically cover wind damage. Most hail policies are written as a "Basic" form which covers Hail, Fire, and Transport but not wind directly. To add wind coverage we have a few options to consider:

GREEN SNAP:

This endorsement will pay when the corn plant is "broken" off below the ear causing 100% loss of that plant. The additional cost of this endorsement varies by company and deductible chosen but is usually around \$.45 per \$100 of coverage on top of your "Basic" rate. If the plant "goose necks" but does not break, this endorsement will not pay.

CORN WIND:

This endorsement is a little more comprehensive because it will pay when corn is blown down with or without green snap. The corn stalk must be down to the point of 20 degrees or less and the shank of the ear less than 12 inches off the ground. Corn Wind endorsement premium will vary some based-on deductible and expiration chosen but generally will cost about \$.90 per \$100 of coverage.

EXTRA HARVEST EXPENSE:

This endorsement will pay 8% of your coverage per acre when the corn is blown over to the same parameters of the Corn Wind Endorsement on the lessor of 20 acres or 20% of the acres in a field. This endorsement again varies by expiration and deductible but would add around \$.35 per \$100.

BUNDLE DISCOUNT:

If you are wanting to add wind coverage to your hail policy, you may want to consider a "Bundle Policy". Each company varies a bit on this, but most require a wind endorsement with extra harvest expense and extra replant coverage. When you "bundle" these coverages, you will receive a discount on the package of around 10%. To be eligible, you must also carry a Multi-Peril policy on the acres insured.

In summary, the wind discussion is one worth having with your agent if you feel you are in a susceptible area. Unfortunately, we find that the parameters of the endorsements do not get reached often and they can get quite expensive.

When reviewing your hail policy, it is also important to make sure the coverage per acre is keeping up with the cost of your inputs and the value of the crop.

SHALLOW LOSSES IN 2023?

-DANA OLSON

Even with the spotty and sporadic rains this past summer, yields continue to surprise producers. If you had asked producers in July, many believed there would be yield losses that would be below a producer's insurance guarantee. Another factor impacting producers this year was the insurance price drop between spring and harvest price for corn and soybeans. With this drop in price, producers with revenue insurance policies needed more bushels to cover the drop in price, otherwise their revenue protection policies would cover the revenue difference. As we look at yields this fall, we are finding many producers had shallow losses not above their deductible.

Enhanced Coverage Option (ECO) is a federally subsidized add-on insurance product that allows a producer to get band of coverage from 86%-90% or 86%-95% on top of their revenue protection policy.

ECO is **AREA BASED** so a loss is triggered when actual county level revenue or yield falls below expected county's trigger revenue or yield. If a loss is triggered, the loss will be paid based on producer's APH. It is possible to have an ECO loss and no MPCI loss and vice versa.

The drop in price from spring to harvest for corn (17% drop) and soybeans (7% drop) may be enough to trigger an indemnity for ECO 95% as it is greater than 5% change in revenue. The other part of the equation to determine a loss for ECO is based on final county yields. Final area yields for 2023 will be reported on/ before June 16, 2024. Below is an example of what the yield would need to be below for a payment to trigger in 2023 for Dane County:

Dane County-Corn		
	Projected	Harvest
Price	\$ 5.91	\$4.88
Dane County Yield (bu.)	194.7	TBD
Revenue (Price x Yield)	\$ 1,151	TBD
95% Trigger Revenue	\$ 1,093	

Corn ECO (95%, 100% of price)	Final County Yield	Indemnity/acre if Producer's APH is 190/acre
Loss begins to trigger if Final County Yield is at:	223.9	\$ 0.51
Maximum loss payment if yield at or below:	202.7	\$ 101.06

Dane County-Soybean		
	Projected	Harvest
Price	\$ 13.76	\$ 12.84
Dane County Yield (bu.)	55.4	TBD
Revenue (Price x Yield)	\$ 762	TBD
95% Trigger Revenue	\$ 724	

Soybean ECO (95%, 100% of price)	Final County Yield	Indemnity/acre if Producer's APH is 50/acre
Loss begins to trigger if Final County Yield is at:	56.3	\$ 1.30
Maximum loss payment if yield at or below:	51.0	\$ 61.42

If you are interested in ECO or other add-on private products, talk to your agent. Your agent can find the right add-on product for you to achieve your risk mitigation goals.

REMINDERS

- \$5 certified organic discount was NOT renewed for 2024
- Sign up for ARC & PLC at FSA is due March 15th.
- Corn planted after first crop hay is uninsurable. However, corn or soybeans planted after a cover crop is insurable.
- There are many benefits for beginning farmers who have farmed less than 5 years.
- Your AD-1026 form must be current and you must be in compliance with conservation rules at NRCS/FSA to receive crop insurance subsidy.
- If you will be breaking new ground in 2024, contact your agent ASAP to review your options.

PREMIER INSURANCE SCHOLARSHIP PROGRAM

Premier Insurance Solutions, LLC is offering (5) \$1,000 scholarships for 2024. These scholarships are available to any student pursuing a post high school education.

Contact Tiffany at:
920-528-8336 or email
tiffanyp@premierinsurancesolutions.com

**Applications are due
March 31, 2024.**
