SPRING 2025 NEWSLETTER

NEW CHANGES FOR 2025 CROP YEAR

-DANA OLSON

ECO Subsidy Increased

For crop year 2025, RMA has increased the subsidy that the government is providing to reduce the cost of Enhanced Coverage Option (ECO) to the producer. **ECO premium subsidy is now 65%**, whereas it had been 44% since the product rolled out in 2021.

Premium Example

Assumption: Dane County WI corn producer with ECO at 95%/50%, APH of 190, Spring Price \$4.66*

2025 ECO Premium = \$7.02/acre
2024 ECO Premium = \$11.55/acre

*Note-Rates vary by county, ECO elections, and APH. Talk to your agent to get a quote for your operation.

ECO is currently the only government subsidized insurance product that allows a producer to get up to 95% coverage. **ECO is county based coverage that triggers when the county's final revenue is below the county's expected revenue.** Once it triggers, losses will be **paid the following June** based on the producer's established APH.

New Breaking Acreage Insurability Changes

New breaking (NB) acreage is defined as acreage which has not been planted and harvested, **or** insured within the 4 previous crop years. Prior to crop year 2025, NB acreage greater than 5% of insured planted acreage in a unit was uninsurable unless it met soil type requirements (then insured at 65% of t-yield) OR approved by a written agreement. New for crop year 2025, NB acreage can be insured at 85% of the applicable T-yield, unless acreage:

- Does not meet soil requirements set forth in the special provisions,
- Constitutes 5% or less of the insured acreage in the unit. **NB reduction to 85% of the applicable T-yield does not apply for NB less than 5% of the insured acreage.** Existing unit APH will be used.
- Is emerging from CRP and meets CRP requirements therefore CRP APH rules apply.

Yield Example for NB > 5%

MCPI Coverage Level x T-Yield x 85%=
Approved Yield for NB
80% x 186 x 85% = 126

Another item to note, NB acreage does not have prevent plant coverage. If you have NB for 2025, please discuss with your agent to make sure you understand the impact on insurability of NB acres as well as the soil requirements for NB to be insurable.

HOW DOES REVENUE PROTECTION WORK AGAIN?

-MATT BALFANZ

This past fall we had another lesson in how a Revenue Protection Policy works in a down market. For the purposes of this article, I'm going to run through a Soybean example as we saw a drop of 13.2% in the Soybeans price from February's average to October's.

That price loss, combined with below average soybean yields this year, triggered several Revenue claims often greater than the insured's expectation.

For example: Let's say you have a 55 bu/ac APH and you take 80% coverage. Your policy will automatically trigger a claim if your yield is below 44 bu/ac. With the flooding in June and the lack of moisture in August to fill the pods, we saw many yields below this trigger. If you take a straight "Yield Protection" policy, and produced 40 bu/ac, you would be paid 4 bu at the February price of \$11.55 or \$46 /ac.

Your "Revenue Protection" policy however, will take into account that the value of those beans was less at harvest as well: 55 bu/ac APH at 80% is 44 bu

guaranteed at the Feb ave of \$11.55 or \$508 / ac. To calculate a loss, we will value the harvested bushels at the lower October average of \$10.03 and compare to the guaranteed revenue: 40 bu X \$10.03 = \$401. \$508 guarantee- \$401 production value = \$107 /ac payment.

The Chicago Board of Trade is used to determine the guarantee and harvest prices. What you sell the crop for, does not factor into the indemnity equation.

Another way to look at it: \$508 rev guar / \$10.03 tells me you need to produce 51 bu/ac to meet your guarantee. Any yield below that will trigger a payment.

Each year it is important to check in with your agent once the October price is determined to make sure you timely pursue any indemnity you may have coming. If you think you are close, we would rather submit a claim and release it than find out in January that a payment was owed.

2025 CROP INSURANCE PRICES

NEW FOR '25: ENTERPRISE UNITS BY ORGANIC PRACTICE

-JENNY KILPATRICK

Producers that run organic and conventional ground have been waiting for the ability to have enterprise units by organic practice for years & it is finally available! This means that if you qualify by practice on corn for example, you can have an enterprise unit on your conventional corn and a separate enterprise unit for your organic corn. No longer will the two practices be put together into one big enterprise unit, as long as you add the EO option to your policy.

This option also allows the availability to have enterprise units on one practice and optional units on another.

As a reminder, to qualify for ANY enterprise unit you must plant in a minimum of 2 sections and at least 20 acres or 20% of the total acres must be in a second section.

If you feel like you may be a good fit for enterprise units by practice, reach out to an agent to discuss your options.

REMINDERS

- Sign up for ARC & PLC at FSA.
- Corn planted after first crop hay is uninsurable. However, corn or soybeans planted after a cover crop is insurable.
- There are many benefits for beginning farmers and veterans who have farmed less than 5 years.
- Your AD-1026 form must match your crop insurance policy name and be current to reflect any operation updates; and you must be in compliance with conservation rules at NRCS/FSA to receive crop insurance subsidy.
- If you will be breaking new ground in 2025, contact your agent ASAP to review your options.

WINTERKILL

-KATE LONZE

Winterkill is always something to be aware of for wheat and forage producers. With the weather extremes we have seen this past year, it is imperative to double check those fields as they come out of dormancy in the spring. Main factors that contribute to winter kill are as follows:

- Ice or ponding, especially in low spots
- Freezing and thawing throughout the winter
- Extremely cold temperatures with little to no snow cover

DO NOT DESTROY A CROP WITHOUT CALLING YOUR AGENT FIRST!

Texting Opt- In

Premier Insurance Solutions LLC is now offering Texting Opt-Ins. If you are interested in receiving text messages from us, please scan the QR code and fill out the form.

These text messages will be reminders such as important dates/deadlines, upcoming meetings and other helpful information we would like to share.

If you have any questions, please contact your agent.

Premier Insurance Solutions LLC
Texting OPT-IN

FORAGE SEEDING

-JENNY KILPATRICK

Premium for all forage seeding is due **Sept. 30th**. This will be on the first bill you see from the company. If not paid by that date, your forage seeding policy will be cancelled for the following year.

Spring 6/15 Fall 8/10	Spring 5/31 Fall 8/20	Spring 5/15 Fall 8/31	Spring 6/15 Fall 8/20
--------------------------	--------------------------	--------------------------	--------------------------

Forage Seeding Final Plant Dates

In the spring, we can insure 90-100% alfalfa, 60-89% alfalfa, and 100% red clover. See map for final plant dates. There is NO late plant period.

If you insured your 2024 spring seeding, you have coverage until May 21, 2025. Therefore, unless your fields look phenomenal, call your agent to turn in a claim to have an adjuster come look at them. You may still be eligible for a claim if your stand is below 75% of an avg. stand. This is an acre-by-acre policy for loss purposes.

If you insured your fall of 2024 seeding (planted between July 1, 2024 and Mid/End of August 2024) and it fails over the winter you have two options:

- 1: If you want to replant, you may be eligible for a replant payment if stand is below 75% of avg stand. MUST have prior authorization from adjuster prior to replanting.
- 2A: If you want to tear up the seeding and go to a second crop (ex: corn) BEFORE the final plant date for forage seeding (5/15 or 5/31 depending on the county) and it is still practical to replant the forage seeding, then the fall forage seeding coverage becomes uninsurable and the second crop is eligible for insurance. Forage Seeding crop must have been replanted to same crop to maintain forage seeding insurability.
- 2B: If you want to tear up the seeding and go to a second crop (ex: corn) AFTER the final plant date for forage seeding (5/15 or 5/31 depending on the county) you may fall into a 1st crop/2nd crop scenario where you could:
 - 35% of loss on Fall FS, insure the corn
 - Take 100% of loss on Fall FS, make corn uninsurable

Big takeaway, if you are going to tear any seeding up, please talk to your agent before doing anything.

SPECIAL EVENT RAIN INSURANCE

-CRAIG LADWIG

Rain insurance is a unique policy that protects against literally just that, Rain! If you have ever been involved in an event that is dependent on mother nature for the success of the event, this policy will interest you. In the past we have covered outdoor weddings, concerts, festivals, county fairs and tractor pulls. To determine how much insurance is needed, fixed expenses, total revenue, and profits need to be considered. The steps to deciding coverage are:

- What is the date(s) of the event?
- Determine potential revenue loss.
- How much rain will cause a revenue loss (in ¼" increments)?
- During what time period(s) will rain cause a loss?

This policy is sight specific, meaning rain totals are monitored directly at the site of the event. The amount of rainfall is measured by an on-site rain gauge. Many of our competitors offer similar policies, but do not offer sight specific monitoring when determining rainfall amounts. Rates are based on the event location, total revenue being covered, the selected time frame and the amount of rain needed to trigger a loss.

Your event does not need to be canceled to collect. If you receive over the amount of rain protected in the insured window, the policy will pay. Sometime attendance will suffer because of rain in the forecast. If you still have the event and the policy pays, it will help subsidize your income for the event. Other times if the event is canceled, you already have fixed costs and the rain insurance loss payment will help cover those expenses.

DAIRY & LIVESTOCK INSURANCE

-DEANNA RANUM

If you are raising cattle, swine or selling milk and are looking to cover the highs and lows in the markets, you have options! There are three types of subsidized policies that may be tools to help you cover risk.

DAIRY REVENUE PROTECTION (DRP)

- Covers you for a decline in the quarterly milk price.
- Options to cover you on a class or component basis
- Available to purchase daily after the markets close.
- Sales close at 8:25 am the following day.

LIVESTOCK RISK PROTECTION (LRP)

- Available for feeder cattle, fed cattle, and swine.
- Protection is based off a loss of price on the board for a given time period.
- Sold in increments from 13 to 52 weeks
- Available to purchase daily after markets close
- Sales close at 8:25 am the following day

LIVESTOCK GROSS MARGIN (LGM)

- Covers a margin of profit using final price and feed costs for cattle, swine or milk.
- Available to purchase every Thursday after the markets close and prices are announced

If you are interested in finding a way to cover your cattle, swine or milk, talk to your agent today for more information.

PREVENT PLANT REMINDERS

-MATT BALFANZ

Last year at this time the prominent conversation revolved around the dry conditions, both in subsoil and on the surface. How quickly that changed. By June we were in the wettest drought on record. In most areas everyone was able to get most ground planted in May but in certain areas, if it was not in prior to June 1st, it got very difficult to finish planting and the prevent plant option became the discussion. As we look ahead today, there seems to be sufficient subsoil moisture, but until we get into April and May, it is hard to say what is in store for us.

As we approach the end of May, if you have areas that are not planted, and wet conditions are keeping you out of the field, you need to reach out to your agent to discuss your options. For Prevent Plant, there are several qualifications to discuss so we can determine if acres are eligible and how they would get paid should you decide to pursue that option.

Some key qualifying questions are as follows:

Is the prevented area at least 20 acres or 20% of the total acres of that crop in that unit? If it is less than that, it will not qualify. You can combine areas within a unit to reach those parameters. For example, four 5-acre areas would satisfy this requirement.

Have the prevented acres been planted, harvested, and insured in one of the last 4 years? If they have not, they will not qualify. This includes acres new to your operation.

Have you significantly changed your rotation? This may cause problems when it comes to eligible acres as you are only allowed to claim prevent plant on the highest number of acres you have planted in the past 4 years for that crop. If you have added land, this eligibility will get increased by the % of cropland you have added to your operation. This is a very important discussion with your agent so there are not any surprises when the claim gets settled.

A positive change made for the 2022 crop year moving forward was the relaxing of the cover crop rule. You are now allowed to plant a cover crop on prevent plant acres and harvest that cover crop without penalty. Cover crops can be hayed, grazed, or chopped, but not harvested for grain. Corn is never allowed as a cover crop.

Communication is key when navigating through a prevent plant situation. Reach out to your agent as soon as you feel you may have a problem.

Prevent Plant Coverage Buy Up Available:

Corn PP Coverage = 55% of planted liability

Soybean PP Coverage = 60% of planted liability

-Option to purchase additional 5% prevent plant coverage.

-This would increase PP coverage on Corn to 60% & SB to 65%

-Very inexpensive option. Average cost per acre to add to your policy is:

- Corn ranges from \$.25 to \$.95, depending on underlying coverage

- SB ranges from \$.15 to \$.70, depending on underlying coverage

-Must add PF (Prevent Plant Five) option to policy by March 15th.

CROP INSURANCE POLICY RENEWAL REMINDERS

Your MPCCI crop insurance policy is a continuous policy and will renew as is unless you make changes to your policy by March 15.

The following is a list of a few items to consider when reviewing your existing policy:

- Marital status changes
- Legal entity changes (FSA and Crop Insurance must match)
- Substantial Benefit Interest change. Must list anyone with >10% interest
- Authorized signer change
- State/County/Crop additions for land added or potentially adding to operation
- Unit structure changes (i.e. Basic, Optional, Enterprise, etc.)
- Crop option changes (i.e. QL, YA, YE, PP+5%, etc.)
- Add-on product changes (i.e. ECO, SCO, Revenue buy-up, etc.)

REPLANT COVERAGE

-RENEE SCHAAL

Replant coverage is included in Revenue and Yield Protection policies. To qualify, the amount replanted must be 20 acres or 20% of the unit, whichever is less. Before replanting, prior authorization from the crop adjuster must be obtained. Contact your agent prior to replanting to initiate a claim.

Replant coverage pays:

- **Corn: 8 bushels X spring price**
- **Soybeans: 3 bushels X spring price**

RMA is reviewing replant payments on corn and soybeans. Announcement on possible increased replant payments starting for the 2026 crop year expected summer of 2025.

****Please make sure you report your original plant date to FSA**

BENEFITS OF HAIL INSURANCE

Crop hail insurance is a very cost-effective insurance policy that offers flexible coverage that can complement your existing MPCCI policy. Basic hail provides acre-by-acre coverage with no deductible. Coverage is based on a dollar per acre that the producer selects. Crop hail policies vary by insurance provider but most basic hail policies include:

- **Hail coverage**
- **Fire/lightning damage**
- **Vandalism**
- **Storage**
- **Transportation to first place of storage**

Producers can add additional options to their hail policies. Some options include:

- **Corn Fodder**
- **Corn Wind**
- **Extra Harvest Expense**
- **Green Snap Corn**
- **Canning Crop Reject**
- **Tobacco Wind**

PREMIER INSURANCE SCHOLARSHIP PROGRAM

Premier Insurance Solutions, LLC is offering (5) \$1,000 scholarships for 2025. These scholarships are available to any student pursuing a post high school education.

**Applications are due
March 31, 2025.**
