

PREMIER INSURANCE SOLUTIONS, LLC

FALL 2026 NEWSLETTER

WHAT'S NEW FOR 2027 CROP YEAR?

- Changes to Supplemental Coverage Option (SCO) and Enhanced Coverage Option (ECO)
- Harvest Reminders and Claims Update
- Forage Insurance - Yield Protection / Revenue Protection Now Available for 2027
- Important Livestock Insurance Changes Coming For 2027
- Dairy Revenue Protection (DRP) Changes for 2027

PREMIUM DUE DATES

Approved for 2026, all crops with an August 15th billing date will receive a **60-day deferral of interest.**

Interest does **NOT** attach to those premiums until **December 1st.**

This deferral applies to hail policies as well.

However, all forage production, winter wheat, and forage seeding **MUST** be paid by **September 30th**, or the policy will be canceled.

SCO AND ECO CHANGES FOR CROP YEAR 2027

Beginning with the 2027 crop year, important changes have been made to the Supplemental Coverage Option (SCO) and Enhanced Coverage Option (ECO).

- SCO trigger increased from **86% → 90%**
- ECO bands narrowed from **86%-95% or 86%-90% → one single band of 90%-95%**
- Producers can now enroll in **ARC + SCO**

These updates are designed to enhance risk management opportunities, improve affordability of coverage, and expand program participation options for agricultural producers.

SALE CLOSING DEADLINES

Winter Wheat	September 30
Forage Production	September 30
Margin Protection	September 30
Margin Coverage Option	September 30
Apples	November 20
Cranberries	November 20
Pasture, Rangeland, Forage (PRF)	December 1

HARVEST REMINDERS & CLAIMS

-MATT BALFANZ

As another growing season comes to a close, we are reminded that every year is different and presents new challenges. 2026 has been a fairly good growing year, with limited areas having suffered drought conditions during pollination, which is limiting the potential of those acres. Soybeans, if they survived July, seem to be getting sufficient water to fill pods and could be a pretty decent crop. The strength in the markets is now adding opportunity and stress to our marketing program.

Here are a few things to keep in mind as we approach harvest of the 2026 crop.

- **Revenue Protection in a higher market:** Last year at this time, we had a price loss from February to October, which required a recalculation of your Crop Insurance trigger point. This year, it would appear that October prices could be higher than the \$4.62 corn and \$11.08 soybean we had in February. If that is the case, we will need to suffer a yield loss in order to trigger a payment from the policy. If you have a 200 BU APH, with 80% coverage, your policy will trigger a payment below 160 BU. If you trigger a loss, the bushels below the trigger will get replaced at the higher October price. If markets fall in October and end up lower than February, we will then need to recalculate a new trigger like we did in 2025.

CLAIMS REPORTING DEADLINES

Earliest of 15 Days after Harvest or:

<u>Crop</u>	<u>Last Day to report a claim</u>
Green Peas	September 15
Canning Beans	September 20
Sweet Corn	September 30
Forage Production	October 15
Barley, Seed Corn, Oats & Winter Wheat	October 31
Cranberries	November 20
Field Corn, Soybeans	December 10

**CLAIMS NEED TO BE INITIATED BY THE INSURED.
CALL YOUR AGENT.**

- **If you are chopping silage, harvesting high-moisture corn, or bypassing severely damaged areas,** an appraisal of those acres will be needed prior to harvest. *We strongly encourage you to take some time to go to the field with the adjuster, or at least discuss with them what they found before they leave the farm.*
- **Do you have any “old crop” in the bin that you will be commingling with “new crop”?** If you do, we will need to send an adjuster out to measure the existing production to be able to isolate the 2026 crop after harvest. Call your agent to set that up ASAP.
- **Harvested production needs to be accounted for by unit.** If you have “Optional Units”, you need to keep track of production by section. If you have “Enterprise Units”, keeping track by section or farm is less important but still highly recommended to keep your options open down the road if you choose to change unit structure and to maintain a more accurate APH.
- **Do you have any “uninsured acres”?** If you are harvesting acres that are designated as uninsured, for whatever reason, this production needs to be kept track of separately from insured production. Failure to do so can negatively affect any claim you may have.
- **It is your responsibility to notify your agent within 72 hours of discovery of crop damage/loss.** If you have concerns about a possible loss, contact your agent to file a claim ASAP. We would rather submit and release a claim than miss the deadline to file it.

As always, communication is key to avoid problems with claims. Keep your agent and adjuster in the loop as you get into the fields and let us know if questions arise.

REMINDERS FOR FALL POLICIES

-DEANNA RANUM

Some crops must be signed up in the fall to have coverage. Below are the fall sign up crops and the policies available:

Wheat

- Yield Protection (YP – bushels only) and Revenue Protection (RP – bushels and price) are available.
- Guarantees are based on your production history and the August average CBOT price for July wheat.
- Final planting dates are listed on the map, with a late plant period that reduces your guarantee by **1% per day**, planted late in applicable counties.
- The deadline to sign up or change your wheat coverage is **September 30th**.

Forage – Yield Protection (YP)/Revenue Protection (RP)

- New for 2027: APH hay will change to being called YP (yield only), or you may switch to RP (yield and price).
- A price will be set by the CEPP. Both YP and RP will use this price as the projected price. RP will also have a harvest price.
- Your established tonnage history is used to determine your guarantee.
- Production records must be kept.
- Contact your agent if you rip up any insured hay acres in the spring.
- The deadline to sign up or change your YP/RP hay policy is **September 30th**.

Hay – Area Yield Plan (AYP)

- Uses the county expected yield and county actual yield to determine losses.
- No production records are required because your individual yields are not used.

- The deadline to sign up or change your AYP hay policy is **September 30th**.

Pasture, Rangeland, Forage (PRF)

- Area based policy covering lack of rainfall over a selected 2 month interval.
- Covers hay or pasture.
- The deadline to sign up for PRF is **December 1, 2026**.

New Seeding – Fall Forage Seeding

- Covers the stand of newly seeded fall alfalfa. Must be planted between July 1 and August 31st (see map for your county's final plant date).
- If you have a spring forage seeding policy, you automatically have a fall forage seeding policy.
- Contact your agent if you seeded alfalfa this fall.
- The deadline to sign up for a new fall forage seeding policy was **July 31st**.

Triticale (Pilot Program)

- Uses your yield history to establish guaranteed bushels.
- The deadline to sign up for triticale coverage is **September 30th**.

WI COUNTIES - TRITICALE

If you plan to grow any of the above crops and want to add or change coverage, contact your agent.

Final Plant Date	10/10	10/10	10/15	10/20
End of Late Plant Period	NO LPP with Winter Options	10/25	10/25	10/25

Winter Wheat Final Plant Dates

Spring 6/15 Fall 8/10	Spring 5/31 Fall 8/20	Spring 5/15 Fall 8/31	Spring 6/15 Fall 8/20
--------------------------	--------------------------	--------------------------	--------------------------

Forage Seeding Final Plant Dates

2027 MARGIN COVERAGE OPTION

-DANA OLSON

Managing Rising Input Costs with Margin Coverage Option

With fertilizer and fuel prices continuing to swing unpredictably, many producers are looking for tools that help protect their bottom line. The Margin Coverage Option (MCO) endorsement offers a way to manage that risk. Available for corn and soybeans, MCO provides **area-based** coverage when margins decline due to lower area yields, falling commodity prices, rising input costs, or a combination of these pressures. This makes MCO one of the few tools that directly responds to rising fertilizer and fuel prices.

Margin = Expected Area Revenue – Expected Cost

Indemnity = Harvest Margin < Trigger Margin

A major advantage of MCO is its use of a fall projected price, which differs from the spring projected price used

in traditional MPCl policies. This allows producers to diversify price risk across two distinct market windows. Reminder, MCO cannot be purchased with ECO.

Below is a chart that compares MCO and ECO:

	MCO	ECO
Similarities		
Type of Coverage	Area based coverage	
Band of Coverage	95%-90%	
Premium Subsidy	80%	
Expected & Final Yields	Same area yields	
Harvest Price	Same fall discovery period	
SCO	Can purchase SCO with either MCO or ECO	
Differences		
Guarantee Based on	Margin (Expected Area Revenue less Expected Costs**)	Expected Area Revenue
Projected Price-CY 2027	Set in September 2026	Set in February 2027
Sales Closing Date-CY 2027	9/30/26	3/15/27
Trigger	Harvest Margin < Trigger Margin	Harvest Revenue < Trigger Revenue

**Costs include urea (corn only), DAP, potash, natural gas (irrigated only), and diesel

Premier Insurance Solutions, LLC awarded six \$1,000 scholarships in 2026.

We will once again be offering scholarships in 2027. If you are interested, contact Payton at 866-528-8336 or email paytonv@premierinsurancesolutions.com.

The deadline to apply is March 31, 2027

IMPORTANT LIVESTOCK INSURANCE CHANGES COMING FOR 2027

-CRAIG LADWIG

USDA's Risk Management Agency (RMA) has announced several important changes to its livestock insurance programs beginning with the **2027 crop year**. The updates affect **Livestock Gross Margin (LGM) and Livestock Risk Protection (LRP)** and provide producers with expanded coverage options and greater flexibility in managing livestock price and margin risk.

Some of the most significant changes involve **LGM Cattle**, along with expanded **LRP coverage for Cull Cows and Unborn Calves**.

LGM Cattle – Higher Weight Limits

One of the biggest LGM changes for 2027 is an increase in the maximum insurable cattle weight to **1,800 pounds**.

For **yearling finishing operations**, the maximum target feeder cattle weight increases from **9 cwt to 12 cwt**, while the maximum target live cattle weight increases from **15 cwt to 18 cwt**.

For **calf finishing operations**, the maximum target live cattle weight increases from **13 cwt to 16 cwt**.

RMA also established limits on the difference between target live cattle weight and target feeder cattle weight. The difference cannot exceed **6 cwt for yearling finishing operations** or **10 cwt for calf finishing operations**.

These changes should allow LGM Cattle to better accommodate today's heavier finished cattle and provide coverage for a wider range of feeding operations.

LGM Cattle – New Ownership Requirements

Another important 2027 change involves the definition of a producer's "share" in the insured cattle.

To qualify under LGM Cattle, a producer must own the calves for at least:

- **5 months** for yearling finishing operations
- **8 months** for calf finishing operations

Producers considering LGM coverage should make sure their ownership period meets these requirements when developing their insurance and marketing plans.

LRP Cull Cow Coverage Expands to 52 Weeks

Dairy producers also have an important LRP change for 2027.

Cull Cow coverage was introduced for the 2026 crop year and initially limited coverage to 13 weeks. Beginning with the 2027 crop year, Cull Cow coverage is expanded to a maximum of 52 weeks.

This is a significant improvement for dairy producers because it provides much greater flexibility in protecting the future market value of dairy cows expected to be removed from the herd and marketed for beef.

Rather than being limited to a relatively short 13-week window, producers can potentially establish protection much farther into the future.

More Options for LRP Unborn Calves

LRP coverage for Unborn Calves was also introduced for the 2026 crop year. This coverage provides producers with an opportunity to protect the expected future value of calves before they are born.

For cow-calf producers, unborn-calf coverage can provide an opportunity to establish price protection well before the calves are actually marketed.

LRP Cattle - Higher Weight Limits

For 2027, the maximum insurable cattle weight has increased to 1,800 pounds.

DIRECT DEPOSIT

All companies offer direct deposit for loss checks, which can help you avoid delays caused by mailing. Without direct deposit, your check is sent to your agent, who reviews it before mailing or delivering it to you. This can add about a week to the time it takes to receive your funds after a claim is finalized.

Keep in mind:

If your claim is later found to have issues, and you received the payment via direct deposit, you may be required to return any overpaid funds. If you're comfortable with this risk, direct deposit is a faster and more convenient option.

Contact your agent if you are interested in setting this up. You can set it up by contacting your agent or by logging into your crop insurance company's website.

DAIRY REVENUE PROTECTION (DRP) CHANGES FOR 2027

-CRAIG LADWIG

USDA's Risk Management Agency (RMA) has announced several changes to **Dairy Revenue Protection (DRP)** beginning with the 2027 crop year. While the basic structure of **DRP** remains the same, there are important updates involving sales periods, milk marketings, Beginning Farmer or Rancher benefits, other livestock insurance coverage and several administrative provisions.

DRP continues to provide dairy producers protection against an unexpected decline in **quarterly milk revenue caused by changes in milk prices and/or milk production.**

New 85% Milk Marketing Provision

One of the most important changes for producers involves actual milk marketings.

Beginning with the 2027 crop year, **indemnities may be prorated if total milk marketings fall below 85% of the combined total of declared covered milk under **DRP** and target milk marketings insured under other livestock insurance plans.**

This provision is especially important for producers using **DRP** in combination with other livestock insurance programs.

Producers should work closely with their crop insurance agent when determining the amount of milk to insure and make sure their coverage elections reasonably reflect expected milk production and marketings.

DRP Sales Period Change

For 2027, RMA modified the **DRP** sales period so that it **always ends on the following calendar day.**

The purpose of the change is to make **DRP's** sales-period structure more consistent with other federal livestock insurance programs.

While this may appear to be a relatively small administrative change, agents and producers should understand the new timing when purchasing quarterly coverage.

However, the new 85% milk-marketing requirement makes it particularly important to coordinate coverage carefully when multiple livestock insurance plans are being used.

Remember the Changes Made for 2026

Dairy producers should also remember that several significant **DRP** changes implemented for the **2026 crop year continue to affect coverage.**

Those changes included increasing the minimum declarable butterfat test to **4.00 pounds**, increasing the maximum declarable butterfat test to **6.00 pounds**, and increasing the minimum declarable protein test to **3.20 pounds.**

RMA also changed the **DRP** termination date to **January 31**, postponed premium billing, and expanded natural-disaster provisions to include reportable animal disease.

2027 REVENUE PROTECTION PRICES

Crop	Base Price 2026	Harvest (Fall)
Corn	4.62	Oct. avg. on Dec. Corn
Soybeans	11.09	Oct. avg. on Nov. Soybeans
Wheat	5.76	7.50 as of August 31
2027 Wheat	6.76 as of September 1	

Price Discovery Periods for 2027 Winter Wheat

Project Price: Aug. 15th - Sept. 14th on Sept. Wheat

Harvest Price (WI): Aug 1 - 31st on Sept. Wheat

Harvest Price (IL): July 1 - 31st on Sept. Wheat
