

Quad Plus®

Drive Repair and Service

Proactive and Reactive Repair and Service, Both On-site and Off-site

Quad Plus technicians are manufacturer trained. This gives us the ability to efficiently diagnose issues with your drive system because of our experience with Siemens & ABB Drives and exclusive access to original Siemens & ABB documentations, including manuals, literature, and schematics.

Quad Plus can repair and support Siemens & ABB legacy drives products as well as Siemens SINAMICS, and most parts that Siemens & ABB manufactures. We have a vast inventory of parts, and if we do not have one in stock or cannot acquire or repair a component, we will research direct equivalent parts and ensure compatibility.

Siemens Northern Regional Repair Center

Three Core Parts of our Repair Business

In-House Repairs - Our customer sends their Drive/Board to our Joliet, IL or Houston, TX Repair Facilities. Repairs take 10-15 business days or in cases of emergency we offer an expedite service which will guarantee your repair is completed in 2-3 business days for an extra expedite fee. If your Drive is determined to be NER (Not Economical to Repair) or NPF (No Problems Found), then your drive will be sent back to you as-is and we will only charge you an evaluation fee.

Field Service - If you need immediate service Quad Plus has a pool of qualified safety and arc flash trained engineers that will travel on-site to troubleshoot and repair your drive system. Our Engineers arrive on-site with their own tools, testing equipment and spare parts to ensure that we have all the equipment needed to get your system up and running.

Spare Parts - Quad Plus's large inventory of Siemens and ABB spare parts are available for pick up or rush shipping.

Drive Repair

Our factory-trained technicians will keep your AC and DC variable speed drives performing efficiently while minimizing downtime. We also offer preventative maintenance that can prevent future catastrophic issues.

Circuit Breaker Repair

Quad Plus offers repair and service for low and medium voltage circuit breakers. We repair damaged circuit breakers, provide refurbishments, and retrofit old machines with new technology.

Warranty Work

We want you to have confidence in our work so we include a one-year warranty on all repairs and service. Plus, we are authorized to repair Siemens parts without voiding the manufacturer's warranty.

Legacy Controls and Drives

When manufacturers stop supporting parts, drives, and controls, our technical staff can repair and service your legacy drives and extend the life of your controls.

Drive Final Test Procedures

Once a drive repair is completed, the unit under goes a load stress test to ensure it will perform safely and as required once put back into operation. Our expert repair technicians will fully test the drive and run the unit through all OEM standard test procedures before the unit is released from our repair lab.
