Quad Plus announces exclusive North American partnership with MKS Anlasser

Through an exclusive North American partnership with Quad Plus, MKS extends their reach for timely distribution, service, and support for their drive system products.

JOLIET, IL – October 1, 2020 – Quad Plus and MKS Anlasser are proud to announce their North American strategic partnership that will combine MKS's high-quality liquid rheostat and wound rotor induction expertise with Quad Plus's first-rate application engineering experience, control system support, and industrial system integration services.

The partnership brings together MKS's extensive portfolio of world-class control systems, including liquid rheostat (LR), wound rotor induction motor (WRIM) control systems, and medium voltage (MV) switchgear with Quad Plus's deep application engineering experience and dedication to prompt and effective control system service and support. Tightening competition in mining, cement, metal recycling, power, and manufacturing industries intensifies the pressure for a highly reliable production environment. MKS recognized this need and wanted to improve their ability to provide quicker service and support for their North American customers.

"Providing optimal service worldwide is foundational to MKS's mission," said Alexander Krekker, President of MKS, "and as a German-based company, servicing customers overseas has always been a challenge. To erase the difference in service levels between regional and overseas customers, we knew we needed the right partner. Quad Plus's reputation for outstanding customer service and engineering application knowledge was a perfect fit."

"As a leading manufacturer of liquid rheostat and wound rotor induction motor systems, MKS's technology has set the standard for wound rotor motor control" said John Crosetto, Chief Executive Officer of Quad Plus. "Our MKS product experience, power side proficiency, and ability to provide sales and service support throughout North America made this a well-suited partnership that directly benefits our customers."

As the exclusive first-line North American sales distribution, service, and parts supplier for MKS, Quad Plus will support their growing international footprint in the LR and WRIM manufacturing industry.

To learn more about LR or WRIM products and services contact Joe Kowalkowski at (815) 740-0860 or jkowalkowski@quadplus.com.

PRESS RELEASE
FOR IMMEDIATE RELEASE

Since 1990, Quad Plus has grown to include several offices throughout the United States and internationally. Today, the company provides automation system integration, control retrofits, and engineering services to a variety of industries. With a skilled design, implementation, safety, and after-care support team made up of mechanical, civil, structural, chemical, controls, and electrical engineers, Quad Plus has extensive process knowledge spanning from oil and gas to cement and mining to converting and beyond. Learn more about this recognized leader in automation system integration by visiting quadplus.com.
