Re: Edge Grip and Edge Grip Extruded

W.P. Hickman is the new pre-fabricated edge metal supplier for Sika Sarnafil. Edge Grip and Edge Grip Extruded roof edge systems will be manufactured exclusively for Sika Sarnafil and replace Edge-Tite and Anchor-Tite systems. The specialized Edge-Tite/Anchor-Tite prefabricated roof edge systems for Ballast, Décor, and PMR Lightguard systems is also being discontinued and will be replaced with a yet to be determined W.P. Hickman product manufactured for Sika Sarnafil.

Specifications, details, and data sheets have been updated to reflect these changes and can be downloaded from our web site (http://www.sarnafilus.com//roofing_tdr.htm). Attached are installation guide sheets displaying procedures for installing Edge Grip and Edge Grip Extruded.

Both Edge Grip and Edge Grip Extruded qualify for warranty durations up to 30 years when used in conjunction with acceptable Sarnafil roof systems (Sikaplan 20 year max.). Edge Grip qualifies for warranty wind speeds less than or equal to 120 mph with regional Technical approval. Edge Grip Extruded qualifies for warranty wind speeds greater than 120 mph with regional Technical approval and approval from the National Manager of Technical Services.
