Re: Solvent Based Adhesives and Polystyrene Insulation

Effective immediately, Sika Sarnafil will not approve the use of solvent based adhesives with any system using polystyrene insulation.

We have found in certain situations when using a solvent based adhesive, the solvent will drive down through the cover board causing damage to the polystyrene.

When using polystyrene insulation within a Sika Sarnafil adhered application the only acceptable adhesives are; Sarnacol 2121, Sarnacol 2166, Sarnacol LR2001. Another option is to use the Sika Sarnafil G410 Peel and Stick membrane
