Subject: Electronic Leak Detection Testing On Waterproofing Areas of 10 Squares or Less

17-07

Effective immediately, the requirement for electronic leak detection (ELD) testing as part of the Sika Corp.-Roofing quality assurance procedures for a waterproofing system warranty is waived if the area is 10 squares or less. Multiple areas of 10 squares or less on the same project are exempt from testing provided that they are completely separate. One example of this would be several balconies on the same building. Under these conditions a water test will not be required either.

This does not apply to projects requiring a single-source warranty, or where ELD or water testing is a requirement of the specifications without the approval of the owner's representative.

The installation must still be inspected and accepted for warranty by a Sika Corp. – Roofing Technical Representative before the overburden is installed.
