

Commshop™

Mcmtechnology's flagship offering is the Commshop solution.

As the name suggests, this solution is designed for customers who need to manage every aspect of their **radio shop operations**. Commshop includes **ALL** of the communications-specific asset management applications, features, and functionality included in Commasset and adds a robust work order system, parts inventory application, and purchase order capability to manage the repair and maintenance of the equipment on the radio system.

key values

- Increase accountability for equipment & inventory tracking
- Reduce the risk of loss and be prepared for annual audits
- Improve efficiencies in workflow processes
- Manage configuration details for complex assets
- Optimize equipment maintenance & reduce downtime
- Enhance end-user experience with multi-device compatibility
- Capture the true cost of doing business by tracking consumable inventory expenditure & labor efforts

agencies

Manage records and database hierarchy for the customers that are supported by the asset and service management applications

assets

Capture detailed records for both serialized and capitalized assets including location, assignment, configuration, and more

id mgmt

Control how radio systems IDs are assigned; avoid duplications and assignments outside of pre-determined ranges

sites

Create detailed profiles for each site identifying key information like location, vendors, site access, and link equipment

alerts

Automate notifications via email and app alerts

dashboards

Easy access and view of key system metrics with configurable and exportable graphs and charts

work orders

Track service and preventative maintenance with labor and materials while linking records to agencies, assets, locations, and more

inventory

Monitor consumable inventory quantities on hand, utilization, and reorder levels

purchase orders

Issue orders to buy consumable inventory and fulfill orders to replenish stock
