

General questions

1. What problems can you identify in this story? Are solutions presented?
2. In what way might this story be relevant in your community? Could microgrids have a similar application in your country?

Further exploration

1. How would regular power outages impact your life?
2. India's blackouts are due to an overtaxed system and poorly enforced power laws that create an unstable and difficult to manage power grid. Are Husk Power's microgrids enough to compensate for the system's failure? What other measures could be taken along with microgrids to support the power grid?
3. Since this story aired, Husk Power has expanded in India, Nigeria and Tanzania. What educational, environmental or other impacts do you think this expansion could have the communities Husk Power works in?
