When it comes to using my templates, there are a few things you need to know. The following will outline a couple of important steps you need to take to ensure you're able to publish quickly and easily with no issues.

1: Make sure you **install the fonts** used in our designs. If you don't, the templates won't look the same as they do in PDF format. This only applies if you plan to customize our templates. Most of the packages come with a font file with direct download links.

2: Read your license file thoroughly before publishing or selling our templates. It's important that you understand what you're allowed to do (and what you aren't!).

3: **Join my Facebook group** for help with low content publishing and to receive free templates and more. You can join here:

<https://facebook.com/groups/lowcontentpublishing>

4: If you plan to customize the templates, you'll need PowerPoint. I design using PowerPoint because of how easy it is for my customers to use.

If you need help customizing the template or creating new ones, Sue's course is THE best I've ever seen on the topic. It comes loaded with video tutorials that show you everything you need to know to quickly customize the templates you purchase from me.
